The grant is available to all customers but can only be claimed by Electric Vehicle Dealers and must be processed before vehicle registration. More information is available at: <https://www.gov.uk/plug-in-car-van-grants/overview>

## Normal Charge and Rapid Charging Modes

**Normal Charge** - Carried out via a standard 3 pin-plug which allows the vehicle to be charged in 12 hours, alternatively the vehicle can be charged in 8 hours via a dedicated charging point. This method of charging is most suited to vehicles that are parked overnight or during the day in one location. The charge point for this mode of charging is located on the offside front wing

**Rapid Charge** - Carried out at a special rapid charging station and takes only approximately 30 minutes to reach 80% of the capacity of the battery. The special cable for fast charging, secured to the station, is connected in the charging flap located at the rear nearside of the vehicle.

## Battery Information

The Battery Pack provides a driving range of up to 106 miles per charge (NEDC cycle). It consists of 80 cells split into 2 parts that are located underbody, at the rear of the vehicle, with no impact on load volume. The electric motor is located under the bonnet at the front of the vehicle.
